What is claimed is:

- 1 1. A massage device, comprising:
2 a driving mechanism; and
3 a plurality of rollers, each having a therapeutic
4 protrusion, facing two intended locations of a
5 sole and an arch of a foot, generating pressure
6 higher than pressure exerted by a surface of
7 the sole of the foot; wherein the rollers are
8 rotatably driven in a predetermined direction
9 by the driving mechanism.
- 1 2. The massage device as claimed in claim 1
2 wherein any two adjacent rollers are rotatably driven in
3 opposite directions.
- 1 3. The massage device as claimed in claim 1,
2 wherein the therapeutic protrusion on the rollers is
3 disposed on an outer surface thereof, and freely
4 supported by the roller.
- 1 4. The massage device as claimed in claim 2,
2 wherein the therapeutic protrusion on the rollers is
3 disposed on an outer surface thereof, and freely
4 supported by the roller.
- 1 5. The massage device as claimed in claim 1,
2 wherein the rollers include a plurality of rotational
3 shafts, disposed on the same level; wherein one of the
4 rollers has a protrusion facing the arch of the foot and
5 a driving locus closer to a therapeutic portion than a

6 driving locus of a protrusion on one of the rollers
7 facing a foot portion other than the arch.

1 6. The massage device as claimed in claim 2,
2 wherein the rollers include a plurality of rotational
3 shafts, disposed on the same level; wherein one of the
4 rollers has a protrusion facing the arch of the foot and
5 a driving locus closer to a therapeutic portion than a
6 driving locus of a protrusion on one of the rollers
7 facing a foot portion other than the arch.

1 7. The massage device as claimed in claim 3,
2 wherein the rollers include a plurality of rotational
3 shafts, disposed on the same level; wherein one of the
4 rollers has a protrusion facing the arch of the foot and
5 a driving locus closer to a therapeutic portion than a
6 driving locus of a protrusion on one of the rollers
7 facing a foot portion other than the arch.

1 8. A massage device, comprising:
2 a driving mechanism; and
3 a plurality of rollers, each having a therapeutic
4 protrusion, facing three intended locations of
5 a sole, an arch, and a heel of a foot,
6 generating pressure higher than pressure
7 exerted by a surface of the sole of the foot;
8 wherein the rollers are rotatably driven in a
9 predetermined direction by the driving
10 mechanism.

1 9. The massage device as claimed in claim 8
2 wherein any two adjacent rollers are rotatably driven in
3 opposite directions.

1 10. The massage device as claimed in claim 8,
2 wherein the therapeutic protrusion on the rollers is
3 disposed on an outer surface thereof, and freely
4 supported by the roller.

1 11. The massage device as claimed in claim 9,
2 wherein the therapeutic protrusion on the rollers is
3 disposed on an outer surface thereof, and freely
4 supported by the roller.

1 12. The massage device as claimed in claim 8,
2 wherein the rollers include a plurality of rotational
3 shafts, disposed on the same level; wherein one of the
4 rollers has a protrusion facing the arch of the foot and
5 a driving locus closer to a therapeutic portion than a
6 driving locus of a protrusion on one of the rollers
7 facing a foot portion other than the arch.

1 13. The massage device as claimed in claim 9,
2 wherein the rollers include a plurality of rotational
3 shafts, disposed on the same level; wherein one of the
4 rollers has a protrusion facing the arch of the foot and
5 a driving locus closer to a therapeutic portion than a
6 driving locus of a protrusion on one of the rollers
7 facing a foot portion other than the arch.

1 14. The massage device as claimed in claim 10,
2 wherein the rollers include a plurality of rotational
